Project Title: Wonders of the Jellyfish

I'd like for this site to be a friendly, animated website across multiple pages as opposed to a blog-style single page. Typical site navigation can be across the top. There are a plethora of drawings, illustrations, and photos within Wikipedia as well as exhaustive information about jellyfish anatomy and species.

Home Page: An interactive, informational front page with fun facts that gives an overview of each subheader page showcasing why they are fascinating creatures and engaging the viewer.

Basic Anatomy: A walkthrough diagram of their broken down anatomy with paragraphs, different sizes (length/width variation)

Habitat and Blooms: Information on jellyfish population and where they live/migrate

A Day in the Life: Detailing their diet, lifespan, how they swim, overview of species

Predator and Prey: Detailing their defense mechanisms: bioluminescence, poison, and predators

Sources: This will function as a works cited, listing sources such as the Wikipedia page and the photo sources, as well as content information credit. https://en.wikipedia.org/wiki/Jellyfish
